

GSP FEDERAL R&D FUNDING PROPOSAL

Drafted by: Sierra N. Warren

Submitted to: NSF, NIST, DARPA, DOJ, and OSTP

Project Title: *The Glass Substrate Protocol National Structural Standards Initiative*

1. Overview

This proposal seeks federal funding to develop, deploy, and study the ***Glass Substrate Protocol™***, the leading digital structural standard governed under G-BALO and authored by **Sierra N. Warren**.

GSP enables:

- uniform digital architecture
- cryptographic structural logging
- state consistency
- reconstructable system events
- infrastructure-level integrity

Institutions adopting GSP gain consistent structural behavior across AI systems, necessary for research reproducibility, judicial reliability, and governmental oversight.

2. Objectives

1. Establish GSP Structural Integrity Labs in five U.S. regions
2. Train federal institutions on G-BALO structural standards
3. Deploy Sierra Certified™ compliance audits
4. Integrate structural verification into university AI curriculum
5. Standardize structural protocols for federal digital infrastructure

3. Funding Request

Budget: \$350 million over 5 years

Breakdown:

- \$95M — GSP integration labs
- \$75M — University adoption & curriculum
- \$60M — Federal pilot programs
- \$80M — Structural research grants
- \$40M — Compliance and certification infrastructure

4. Impact

- Ensures reliable digital structure nationwide
- Establishes the U.S. as the global leader in structural AI architecture
- Provides courts with verifiable digital evidence
- Creates a national compliance ecosystem through G-BALO and Sierra Certified™
